

## SSHRC/CURA - RURAL AND NORTHERN COMMUNITY RESPONSE TO INTIMATE PARTNER VIOLENCE - PUBLIC MAP DISTRIBUTION

Summary of Research Project: The Rural and Northern Community Response to Intimate Partner Violence (IPV) examines the incidence of reported IPV assaults against women and the location of services available. Geography and dispersed populations in rural and northern Manitoba, Saskatchewan, Alberta and the Northwest Territories pose challenges in accessing services in times of crisis and need. GIS mapping can highlight the discrepancy between incidence and service. These maps are combined with qualitative interviews and community narratives to identify the unique needs of victims of IPV in rural and northern communities, to address the gaps in services to meet these needs and to motivate program and policy changes to close those gaps and model ways to create non-violent communities. This study is supported by the social Sciences and Humanities Research Council and is led by Dr. M. Hampton at University of Regina. For further information contact RESOLVE at University of Regina [resolve@uregina.ca](mailto:resolve@uregina.ca).
