

Climate Awareness

Anupras Burokas | Mohamed Bashir | Timothy Pasion

This application is intended with the hope of reducing carbon footprint to support goal 13 of UN's Sustainable Development Goal. Climate change is one of many important environmental issues that needs to be addressed.

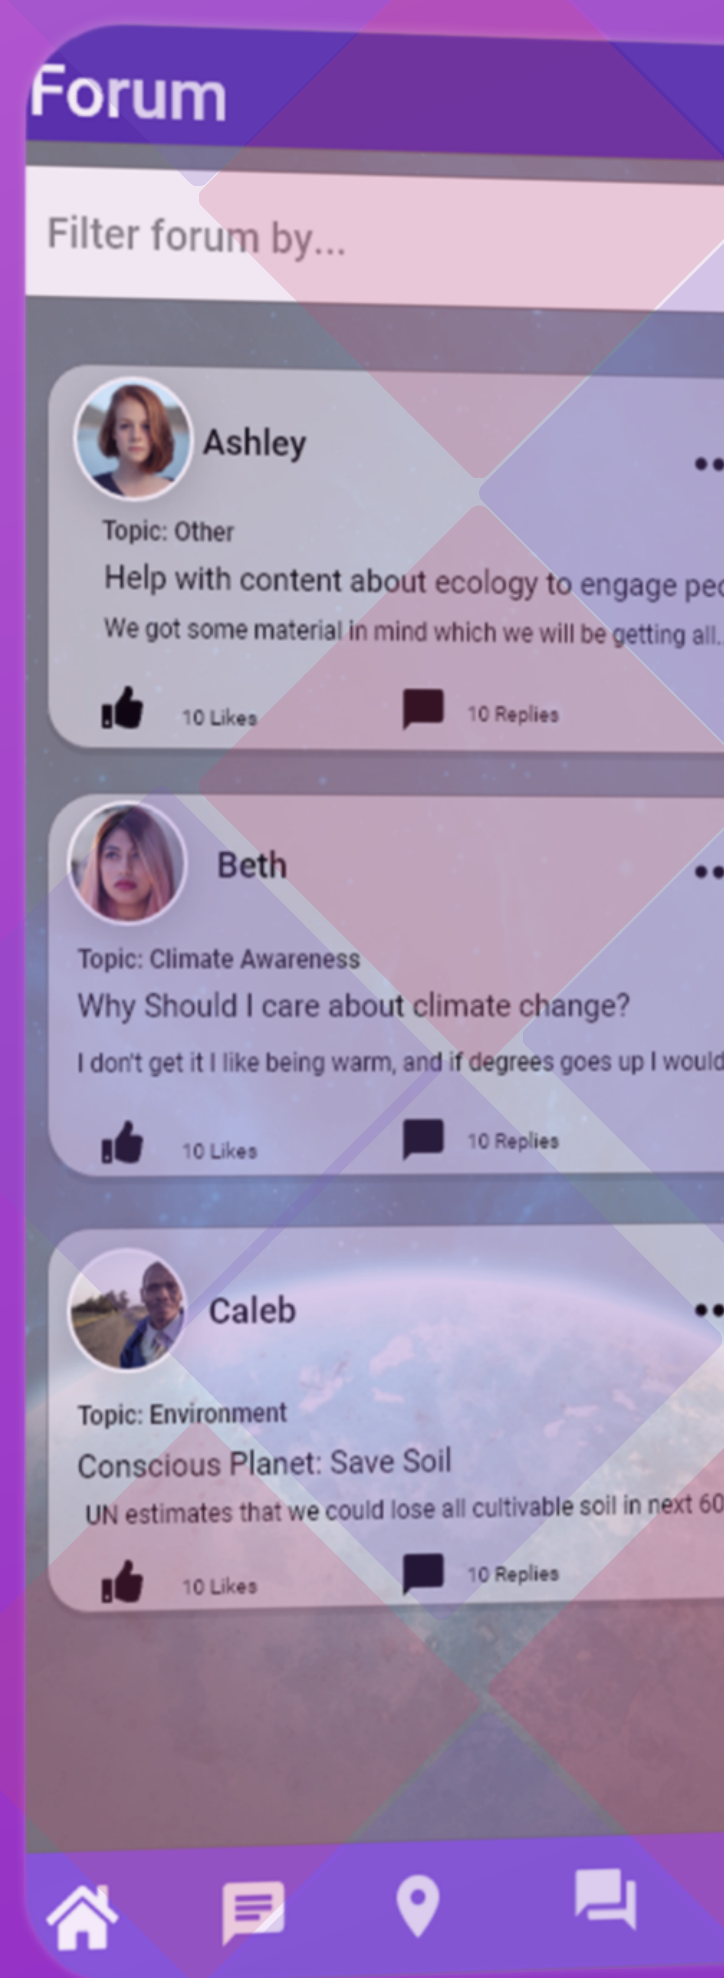

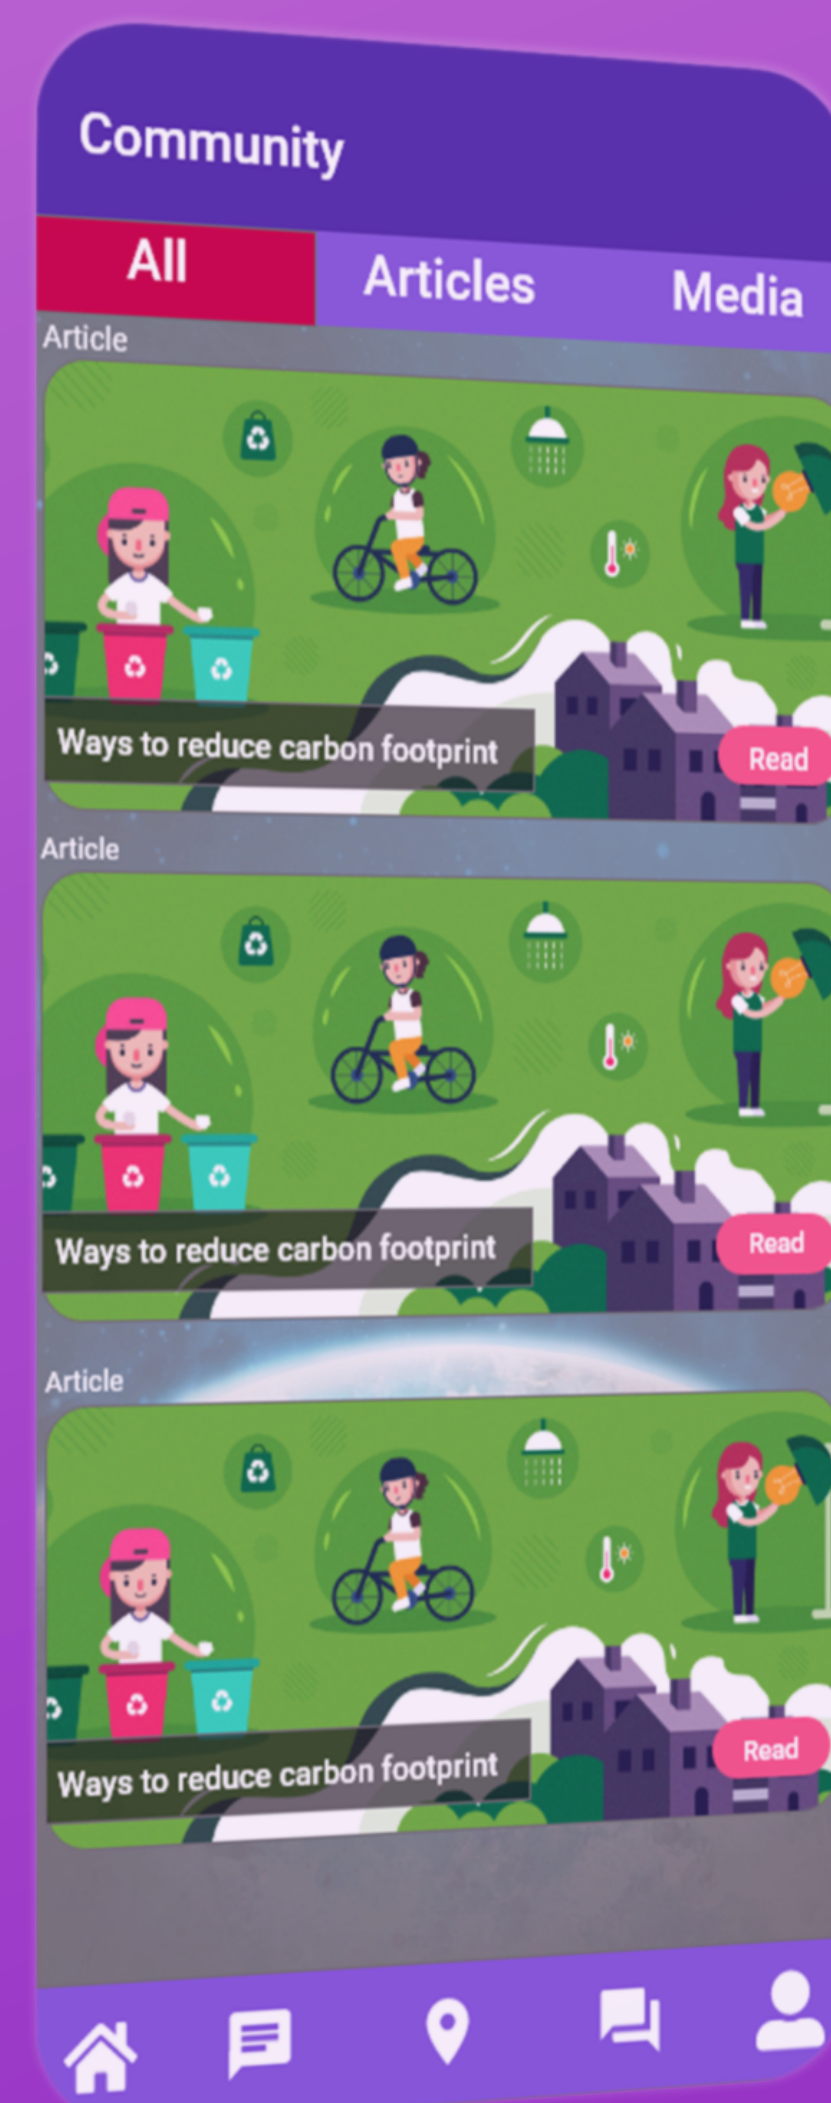

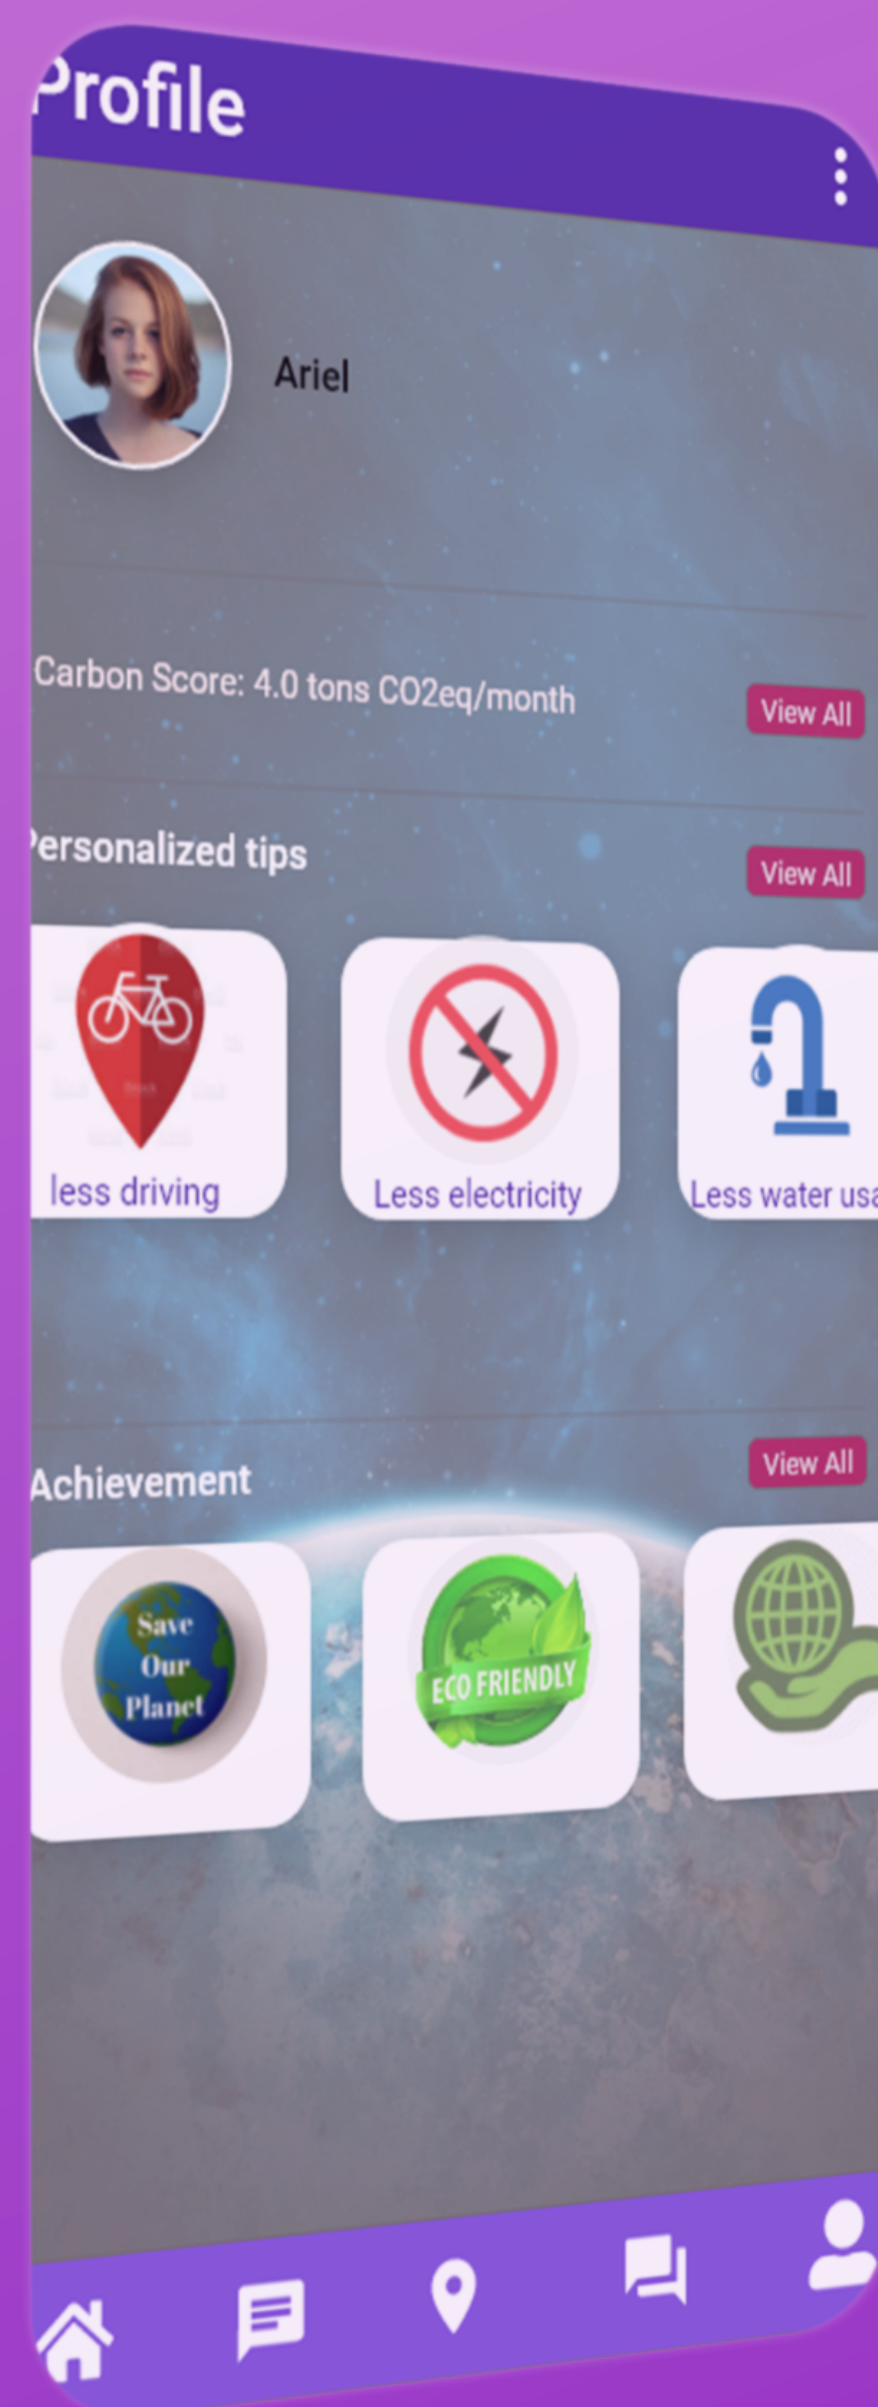

We want to help educate the community about the climate issues we face by developing a knowledge-based content application that provides users with a supportive community, informative resources, and tools to help lower their carbon footprint.

In App functionality

- Post articles and videos
- Chat capabilities
- Carbon footprint Calculator
- Tips and recommendation
- Achievements
- Community forums

Technology Stack and Architecture

- Flutter SDK
- Cloud Firestore
- Model View Viewmodel Architecture
